**EMAX - THE CONTROLLED RELEASE FERTILISER
THAT WILL NOURISH YOUR TURF THROUGHOUT WINTER**

EMAX

It's fair to say that the results from EMAX speak for themselves. EMAX is a controlled release fertiliser that has been specifically designed for turf production with its polymer coating and NPK content of 20-0-15 + Ca + Mg. We are thrilled to supply this to turf growers across the country, along with free advice and treatment plans.

EMAX has been formulated to release nutrients for 3-4 months, based on an average temperature of 20 degrees. We have seen a significant longer release period during the cooler

months, which has led to growers reaping rewards the following Spring. Having applied **EMAX** with a FACTS Qualified Advisors (FQA) derogation in November, a turf grower reported that he "would have run out of turf to lift in the Spring if I hadn't used **EMAX**."

During the trials, the last dose of Nitrogen was applied as AN on the final day before the NVZ closed period of 15th September, and this had disappointingly ceased benefitting the turf by the middle of December at the latest (*see Field 1*). **EMAX** was applied to a different field (*see Field 2*) about a month later in mid-October using an FQA derogation. Please see the results for yourself - both fields were photographed at the end of February.

There were plenty of growing days over the winter months where the turf needed nutrition, and the **EMAX** released a little on those days which kept the turf healthier and in better condition.

The area of turf that was treated with AN on the 15th September looks very sick and yellow. This turf will take some time to recover in order to be able to lift and sell.

This was avoidable if **EMAX** was used to maintain health over the cooler months.

Following the fantastic results seen on **EMAX** treated turf, we are excited to be supplying this to many turf growers for the upcoming winter.

EMAX

TURF FERTILISER

ACTIVE INGREDIENT

20% Nitrogen, 0% Phosphate,
15% Potassium, 2.9% Ca,
1.2% Magnesium

SPREADING RATE

Spreading Rate 150-400kg per ha
depending on requirements

PACK SIZE

1 Tonne

AREA COVERED

4-8 Hectares

“ Would have
run out of turf to
lift in the Spring
if I hadn't used
EMAX. ”

“ The ideal
product for
turf growers
in NVZ's ”
