

Activate-G[®]

Activate-G[®] is a specialist water conditioner containing 50% w/w activated ammonium sulphate with a built-in uptake agent.

For use only as an agricultural/horticultural water conditioning agent.

Activate-G[®] has been specially formulated to combine with the active ingredient of a pesticide to improve its uptake into the plant. This is done in two ways, firstly by stopping the pesticide 'locking up' when used in areas of hard water, & secondly by helping the chemical uptake into the plant. Using Activate-G[®] stops any loss of active ingredient as it is drawn into the plant rather than sitting on the surface & evaporating or running off. Use this product with all herbicides, especially when trying to control tough, waxy weeds.

HEALTH & SAFETY INFORMATION

- Keep out of reach of children.
- Do not eat, drink or smoke while using product.
- IF ON SKIN: wash with plenty of soap and water.
- IF SWALLOWED: Immediately call a POISON CENTRE or doctor/physician.
- Avoid release into the environment.
- Store in closed container.
- The COSHH (Control of Substances Hazardous for Health) Regulations may apply to the use of this product at work.
- Safety data sheet available on request.

PROTECT FROM FROST.

RECOMMENDATION FOR USE

Activate-G[®] is specifically formulated to combine with the active ingredients in the pesticide & prevent the loss in activity that occurs due to alkaline hydrolysis when pesticides sensitive to high calcium or magnesium salts are applied to hard water. Activate-G[®] should be used with all approved formulations of glyphosate & other sensitive herbicides.

RATE OF USE:

1 litre per 200 litres of water (0.5% spray solution) per hectare.

APPLICATION:

Activate-G[®] can be applied through a conventional boom sprayer or knapsack.

Ensure that the sprayer is calibrated, clean and all working parts are in good condition.

MIXING:

Half fill the sprayer tank with clean water. Add the Activate-G[®] to tank BEFORE THE PESTICIDE.
